Select a popular website from the Web that focuses on news, sports, or entertainment that has both a desktop and a mobile version of the site. Examine the accessibility of the site, and summarize your findings in 2-3 paragraphs. (Include a separate text file for this in your submission.)

       The site I chose to go to was [https://disneyworld.disney.go.com/admission/tickets/?ef_id=CjwKCAjwuJ2xBhA3EiwAM VjkVNYIwZdw_-SQqzZSjh56Z5LIINwt39XvTJ0gf4GhS9FvjlN3b0OvFBoC8OEQAvD_B wE:G:s&s_kwcid=AL!5060!3!592047292683!e!!g!!disney%20world%20tickets&CMP=K NC-FY24_WDW_TRA_DOME_W365_TKT_TCKC_Tickets_Rack_Gold|G|5241213.RR. AM.01.01|MCRJIOW|BR|592047292683&keyword_id=aud-300113739056:kwd-980993 35|dc|disney%20world%20tickets|592047292683|e|5060:3|&gad_source=1&gclid=CjwK CAjwuJ2xBhA3EiwAMVjkVNYIwZdw_-SQqzZSjh56Z5LIINwt39XvTJ0gf4GhS9FvjlN3b0 OvFBoC8OEQAvD_BwE](https://disneyworld.disney.go.com). This is the official website for Walt Disney World to book theme park tickets. In desktop mode, there are a lot more things to view and click on. At the top, there is a sign-in, preferred language button, and a search bar along with multiple links to the homepage, parks and tickets, places to stay, things to do, shop, help and rules, cart, and my Disney experience. In the body, the h1 is front and center with a picture behind it, and everything below that (the tickets in containers) is also centered. The footer contains many links in four columns.

       As the page gets smaller, the links disappear into a toggle menu which saves space. The only link that stays is the homepage link which jumps to the middle of the page. The sign-in, preferred language button, and search bar also disappear and are replaced with a simple search icon. The h1 continues to be centered while the background image gets smaller until both disappear when the page changes to more of a mobile window. Concerning the body, the ticket containers change to smaller boxes which keep all information inside. Instead of having the description on the left and price on the right, it changes to having the description on the top and the price on the bottom. Concerning the footer links, they disappear into a dropdown menu where there are two columns, and then one column as the page gets smaller.

       I would say that the developers in charge of development did a great job of creating a website for desktop and mobile users. Everything that is on the desktop site can be found in the mobile version. There is no frustration of not finding what you need and nothing gets cut up awkwardly. In general, this site is user-friendly and accessible.
